# Sustainability:

- **Purpose of this Dapp:**
- The protocol's ultimate objective is to create a reliable, long-lasting, and simple source of stable coin accrual. IgniteBusd's development team wants to build a direct decentralized application (dApp) where users can exclusively deal with stable coins without being concerned about bear market price swings. Users who want to assist the expansion of DeFi initiatives in the ecosystem without taking on a lot of risk might think of this as an additional layer of safety.
- **Where is IgniteBusd capital coming from and has the team KYC'd yet?**
- The IgniteBusd team does not hold user money intended for investments in trust. Only fees from stakes and un stakes are invested by us. The team has not yet been KYC'd. In the future, after additional audits are finished, we will likely contemplate a KYC.

- **What category of crypto project would IgniteBusd Fall under? ROI dApp? miner? Staking protocol?**
- Ans:) IgniteBusd has a lot going on inside, thus it doesn't exactly fall within the typical DeFi application categories. One way to think of the protocol is as a hybrid between a ROI dApp and a staking mechanism. IgniteBusd is, in essence, a diversified investment fund.
- **Sustainability of project and sustainable earnings outside the protocol:**
- Our portfolio is continually being expanded and diversified as we conduct our covert debut. We are using this early growth period to make sure that we are allocating the proper amount of capital to each area. We're still in the early stages, thus the investment portfolio has not yet accrued enough earnings to fund our smart contracts. Developers are not permitted to alter any aspects of the protocol. Fees are unchangeable. The yield cannot be changed. Mechanisms are immutable. We would urge consumers to unstake their initial investments if we discover that the profits are unsustainable, and we would then need to deploy a V2 contract with new rates.

-

- **Diversified Investment Fund:**
- An investment fund that is broadly invested across many market sectors, assets, and/or geographic areas is known as a diversified fund. In that case for IgniteBusd is investing in Lending Protocols, Liquidity Mining, New DeFi Projects and Validator Hosting.
- **‘ New defi projects’ section of diversified investment:**
- In their endeavours to develop fresh and intriguing applications in the field, IgniteBusd plans to invest in additional DeFi development teams. The top earner for the diverse Portfolio will be this in conjunction with investments in reliable methods. After completion, the portfolio dashboard will display the wallet address, holdings, partnerships, and anticipated revenue.
- **Is it really possible to make 2-6% per day?**
- If you only consider passive income strategies, the answer is categorically NO. We are utilising fees for ACTIVE investing techniques here at IgniteBusd. The highest variation in prospective returns can be seen here. By actively investing in the proper protocols, launches, and firms, engaged users can earn 10-100X returns in DeFi, one of the few financial sectors where they can do so.

- **How is this sustainable?**
- After sufficient volume enters and departs the protocol, sustainability is what IgniteBusd aims to achieve. The true treasury leverage can be seen once there has been enough movement, even if we assume 10% for stakes and somewhere between 7% and 2% for unstakes. The treasury revenue will eventually exceed the TVL requirements, but it will take time and deliberate budgeting to achieve this. This sustainability estimate is based on the safeguards provided by our Smart Contract mechanisms alone, which include stake earnings rate resets based on compounding/claiming. We began with \$30K in external reserves, which will give us some more power for fee investments.

# PLATFORM:

- **Taxes:**
- 0% tax on compounding or claiming earnings, moreover If you unstake initial Investment, fees apply and earnings are collected automatically. If you only collect earnings, then no fees.
- **Staking Investments:**
- You receive incentives after unstaking your initial. Any additional stakes are unaffected by unstaking. For precise earnings calculations, please see the tables on our webpage. If you unstake vs if you claim, the payouts are different.
- Furthermore unstaking does not have an effect on existing stakes. However Currently, you can only create new stakes. You cannot add to an existing stake. Regarding the staking value the stake amount you choose to invest is taken into account when determining the 10% staking charge. The original stake amount is used to calculate the unstake fees (minus staking fees). Moreover you can unstake your initial investment at any time

- **Compound and collect:**
- Your winnings are paid to you when you collect, and all stakes' daily winnings are reset to zero at that time. A new stake is created with the amount compounded, and the same reset occurs. If you compound, the daily rate resets to 2% once more, but your overall staked value is now increasing your earnings. Moreover Each time you compound, a new stake is made. A distinct stake is the compounded value. Fees would be levied based on how many days the stake had been live if you sought to unstake that compounded sum. The compounding process is in no way impacted by taxes or other costs. Do not forget that compounding will result in a new stake. There would be charges if you sought to unstake this new stake. When creating this stake using the compound option, no costs are charged.

- **Fees , return rates and pay outs:**
- Our smart contracts do not have any owner functions. Return rates, fees, withdrawal policies, and staking possibilities cannot be altered by the team. A fresh set of Smart Contracts would need to be launched and a community vote would be necessary if a modification was necessary.
- **Meaning of collection in the platform statistics lab:**
- Total rewards collected by users for the platform (excluding initial withdrawals).
- **Calculator ends at 100 days , does the earning also stop?**
- No. You will be earning 6% retroactively after 51 days for the entire duration of the protocol.
-

# What is Lending in IgniteBUSD?

- In lending the Ignite platform gives you 3% of lending fee.
- Will I get 3% everytime? No You can't.
- If you lend. Only you are the user. So you will get 3% from each investment. Suppose another person comes and they also lended then the formula will be applied  $\text{totalLendUsers}/3\%$  so like that you will get.
- Lending importance is to support TVL.
- Which makes IgniteBusd none Ponzi. In many platform there is no strong backup supports. We have an opportunity that every lender of our platform will be satisfied because he is earning and daily base he can collect his dividends
